

EXP : 1 -Caesar Cipher

AIM:

To encrypt and decrypt a message using the Caesar Cipher by shifting each letter by a fixed number of positions

ALGORITHM:

- 1.Read the plaintext and shift value.
- 2.Shift each alphabet by the given key.
- 3.Display the encrypted text.

CODE:

```
text = input("Enter Text: ")
key = int(input("Enter Key: "))
result = ""
for ch in text:
    if ch.isalpha():
        if ch.isupper():
            result += chr((ord(ch)-65+key)%26+65)
        else:
            result += chr((ord(ch)-97+key)%26+97)
    else:
        result += ch
print("Encrypted Text:", result)
```

OUTPUT:

```
main.c
1  #include <stdio.h>
2  #include <string.h>
3
4  int main()
5  {
6      char text[100];
7      int key, i;
8
9      printf("Enter the text: ");
10     fgets(text, sizeof(text), stdin);
11
12     printf("Enter the shift key: ");
13     scanf("%d", &key);
14
15     key = key % 26;
16
17     for(i = 0; text[i] != '\0'; i++)
18     {
19         if(text[i] >= 'A' && text[i] <= 'Z')
20         {
```

Output

```
Enter the text: PALLAVI
Enter the shift key: 3

Encrypted Text: SD00DYL

=== Code Execution Successful ===
```
